Butterflies - found in gardens - beautiful - colours of rainbow - about 50,000 kinds - fly from flower to flower - suck nectar - feelers help - to find its way - tube mouth - suck nectar - tiny side holes - to breathe - life cycle – four stages-egg, larva, pupa and adult – short life span – William Wordsworth - poem on butterfly – could not tell – whether sleeping or feeding.

Summary**Rough Copy**

Butterflies are found in gardens. There are about 50,000 different kinds of butterflies. They fly from flower to flower to suck nectar. The feelers help the butterfly to find its way. The tube mouth helps it to suck nectar and the tiny holes on the sides of its body help it to breathe. The four stages of it's life cycle are egg, larva, pupa and adult. The life span of a butterfly is very short. William Wordsworth wrote a poem on butterfly. He said that he could not tell whether it was sleeping or feeding.

*15.(a) **Global Warming**

Temperature increases year by year which results season changes. So Monsoon fails. There is very low rainfall now a days. Due to global warming, the glaciers from polar region melt rapidly. So the sea level increases. It leads to the submergence of landmass in future. We are cutting trees mindlessly. We should stop this. We should save the forest. We should develop more social forests to cool the earth.
